## Abstracts

According to our (Global Info Research) latest study, the global Dermatoscope market size was valued at US\$ 50.8 million in 2024 and is forecast to a readjusted size of USD 95.6 million by 2031 with a CAGR of 9.6% during review period.

Dermatoscopy (also known as dermoscopy or epiluminescence microscopy) is the examination of skin lesions with a dermatoscope. This traditionally consists of a magnifier (typically x10), a non-polarised light source, a transparent plate and a liquid medium between the instrument and the skin, and allows inspection of skin lesions unobstructed by skin surface reflections. Modern dermatoscopes dispense with the use of liquid medium and instead use polarised light to cancel out skin surface reflections.

Dermatoscope can be well observed in the epidermis, the epidermis and dermis junction structure pigments and superficial vascular plexus vessel size and morphology within the superficial dermis, in order to make the appropriate diagnosis of pigmented skin.

Dermlite, Heine, Dino-Lite, Canfield, WelchAllyn?AMD Global, etc. are the leaders of the industry, with about 68% market shares.

Europe dominates the dermatoscope market with 31% market share, followed by North America.
