Abstracts

Dermatoscopy refers to the examination of skin using skin surface microscopy. It is a non-invasive diagnostic procedure that permits a quick in vivo assessment of morphology of the epidermis, the dermoepidermal junction, and the papillary dermis, which cannot be inspected with a naked eye. With dermatoscopy, dermatoscopic structures can be assessed effectively, which helps compare with the basic histopathologic alterations, and hence, the technique can be viewed as a connection between clinical and histopathologic examination.

Scope of the Report:

This report focuses on the Dermatoscopes in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. With the increasing pollution, the atmosphere loses its protective filter functions and witnesses a depletion in the ozone levels that result in more solar ultraviolet radiations reaching the surface of the Earth. This will lead to a rise in the prevalence of skin cancer diseases such as non-melanoma and melanoma, which will consequently drive the need for dermatoscopes.

The dermatoscopes market appears to be competitive. The regional players provide products at a much lesser price and pose a stiff competition to the global companies, especially in the low-end markets. The well-established players focus on the development of innovative and user-friendly products and make huge investments towards manufacturing and delivering innovative products, which will help them expand their product portfolio.

The Americas will be the major revenue contributor to the market by 2021. This mainly attributes to the increasing demand for dermatologists and the growing awareness of

skin disorders in countries such as Mexico. Additionally, the expected increase in the geriatric population in countries such as the US will also augment the market's growth prospects in this region.

The worldwide market for Dermatoscopes is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
