Abstracts

Desalination systems are used to extract the salt or removal of salt from the sea water and produce water that is more suitable to human consumption, irrigation, and various industrial uses.

Scope of the Report:

This report focuses on the Desalination System in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The availability of fresh water for consumption is very low and is declining at a faster rate. With the rise in demand for fresh water, there is a need for an alternative source of fresh water. This problem can be solved by using desalination system, which turns the unusable sea water into fresh water, by removing the salt and various minerals from the sea water. Desalination system works by using either electrical, thermal, or chemical energy.

The worldwide market for Desalination System is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
