According to our (Global Info Research) latest study, the global Desalting and Buffer Exchange Resins market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Desalting and buffer exchange resins are materials used in biochemistry and molecular biology. Desalting resins help remove salt ions from a solution, especially after protein purification, enhancing sample purity. Buffer exchange resins facilitate changing the buffer solution around a biomolecule, enabling researchers to modify experimental conditions or prepare samples for downstream applications. These resins are crucial in processes like protein purification, ensuring a controlled environment for biochemical studies by adjusting salt concentration and buffer composition.
