Water carrier products are being considered as one of the essential products that are being used in day-to-day life. Products such water kettles, water bottles, water taps, hot water dispensers, washing machines are being used in large scale in both households as well as commercial level. However, these products encounter with various negative effect due to its exposure to various potentially harmful substances. Limescale is one harmful negative side effect incurring in these kinds of water carrier products. Limescale is a chalky off-white crust that remains behind kettles or boilers. Limescale is an essentially harmful substance that acclimates on surfaces causing malfunctioning of the water carrier products altogether. As a result, these kinds of water products requires time-to-time maintenance which eventually triggers demand for products such as descalers. Descaler consists of several chemical substances which have the ability to remove limescales on water carrier products.
