Desiccant Sachet is a small package filled with hygroscopic material, which is used to absorb moisture from the surrounding environment, keep items dry, and prevent moisture-induced corrosion, mold, and deterioration. Desiccant sachets are usually made of breathable packaging materials (such as non-woven fabrics or paper) and contain highly hygroscopic desiccants such as silica gel, molecular sieves, activated carbon, or calcium chloride. These materials can absorb moisture from the air through physical or chemical effects, thereby maintaining low humidity in the environment. Desiccant sachets are small in size and easy to carry, and are widely used in many industries to protect the quality of products and extend their service life.
