Abstracts

According to our (Global Info Research) latest study, the global Design as a Service (DaaS) market size was valued at US\$ 1005 million in 2025 and is forecast to a readjusted size of US\$ 2384 million by 2032 with a CAGR of 13.3% during review period.

Design as a Service (DaaS) is a cloud-based design service model based on subscription/on-demand delivery. Businesses and individuals no longer need to build their own design teams or purchase complete design software and toolchains. Instead, they access professional design capabilities through a platform, on a project-by-project, time-by-time, or delivery-by-output basis. Its service scope typically covers product design, UI/UX design, industrial design, brand visual design, 3D modeling and prototyping, etc. Through remote collaboration, digital tools, and standardized processes, it achieves 'on-demand' and flexible supply of design capabilities, essentially representing the service-oriented and platform-based output of design capabilities.

Design as a Service is benefiting from trends such as enterprise digital transformation, the normalization of remote collaboration, and accelerated product iteration, leading to continuous demand growth. In the future, enterprises will increasingly favor 'asset-light design capability acquisition,' especially startups, SMEs, and industries such as cross-border e-commerce, software, and gaming, which will increasingly rely on fast, low-cost, and high-quality design resources. Simultaneously, AI design tools (such as generative design and automated UI generation) are merging with DaaS, driving the industry's upgrade from 'human-outsourced design services' to 'AI + design collaborative service platforms,' significantly improving industry efficiency and standardization.
