A desktop AC adapter is a power adapter that is usually used to provide power to various electronic devices, such as computers, printers, monitors, routers, stereos, etc. The desktop AC adapter generally includes a host and a power cord, and the host has an AC input interface and a DC output interface. The AC input can be connected to a wall outlet, while the DC output can be connected to the device. The host is usually a desktop design and can be placed on the desktop stably, so it is also called a desktop power adapter. Desktop AC adapters usually have higher power and voltage output, which can meet some devices that require high current and high voltage. They are usually larger in size because more cooling space is required to keep the adapter working stably. Compared with wall-mounted AC adapters, desktop AC adapters are generally more suitable for use in fixed places such as offices and homes, and are less suitable for portable and mobile use.
