According to our (Global Info Research) latest study, the global Desktop Electronic Spirometer market size was valued at US\$ 740 million in 2025 and is forecast to a readjusted size of US\$ 1105 million by 2032 with a CAGR of 6.0% during review period.

A desktop electronic spirometer is a medical device designed for measuring and assessing lung function through a diagnostic test called spirometry. Spirometry involves the measurement of the volume and flow of air during inhalation and exhalation. Desktop electronic spirometers are typically used in clinical settings, hospitals, or medical offices, and they offer a more comprehensive set of features compared to portable or handheld spirometers.

Desktop electronic spirometers have been increasingly designed to integrate with digital health platforms and electronic health records (EHR) systems. This integration allows for seamless data transfer, remote monitoring, and comprehensive patient management.
