Abstracts

The global Desktop Linerless Label Printer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Linerless labels enhance speed in operations while maintaining quality. It eliminates the added step of requiring the printer or the operator to peel off the label backing and discard it. Instead, operators can take the label straight from the printer and affix it immediately to the package. It's often noted that using traditional labels with liners generates the most waste during the packaging process. After peeling and affixing the label, the backing is tossed in the trash and sent off to the landfill. By getting rid of the peel-off backing, linerless labels reduce waste making it a greener option that is better for landfills, and the environment. With the elimination of the label backing, users benefit from more linerless labels per roll versus a traditional roll of labels with liner.
