The global Desktop Optical Fiber Endface Inspector market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Desktop Optical Fiber End face Inspector is a device used to inspect the quality of optical fiber end face. It is usually used in the maintenance and installation process of optical fiber network to ensure the quality and reliability of optical fiber connection.

Desktop Optical Fiber End face Inspector capabilities and features typically include:

1. Optical Optical fiber end face inspection: It can collect and display high-definition images of the end face of optical fiber connectors, adapters or connectors. It detects and displays defects such as dirt, scratches, damage, bumps or dents on the end face.
2. Auto-focus and focus adjustment: The detector usually has an auto-focus function, which can automatically adjust the focus to ensure a clear end-face image.
3. Image magnification: The detector can magnify the end face image to better observe and analyze the end face quality.
4. Image storage and recording: It can provide image storage and recording functions for subsequent reference and comparison.
5. Visual interface: usually has an intuitive user interface, so that the operator can easily use and operate the equipment.
6. Compatibility: The detector usually supports various types and sizes of fiber optic connectors, such as LC, SC, ST, etc.
7. Data management and export: The device usually has data management and export functions, which can export the detection results to a computer for further analysis and recording.
