According to our (Global Info Research) latest study, the global Desktop Power Adapter market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Desktop power adapter is a power supply conversion device for small portable electronic equipment and electronic appliances. Its function is to convert AC power to DC power, or to convert one DC voltage to another DC voltage. The characteristic of the desktop power adapter is that its body needs to be placed on the desktop instead of directly plugged into the socket. It requires an AC line to connect to the mains power, and then a DC line to connect to the device that needs power. The advantage of the desktop power adapter is that it can withstand greater power and has better heat dissipation performance. It is suitable for notebooks, monitors, printers and other equipment. The disadvantage of the desktop power adapter is that it takes up a lot of space, is inconvenient to carry, and can easily cause cable clutter.
