According to our (Global Info Research) latest study, the global Desktop Press Machine market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A bench press is a small press machine that is used on a desk. Because it is used on a table, it is also called a table press. A material to be processed, such as metal, is placed between the dies of the press machine, and strong pressure is applied to deform the material into the shape of the dies for processing. It is also used for powder molding and crimping, in which metal or chemical powder is placed in the die and high pressure is applied. The simple structure of this processing equipment allows for easy maintenance, and it has a long service life.

The global market for desktop press machines is currently experiencing steady growth due to the increasing demand for personalized and customized products. These machines are widely used in various industries such as printing, packaging, textiles, and electronics for tasks such as embossing, stamping, and heat transfer printing.
