According to our (Global Info Research) latest study, the global Desktop X-ray Absorption Fine Structure Spectrometer market size was valued at US\$ 117 million in 2024 and is forecast to a readjusted size of USD 155 million by 2031 with a CAGR of 4.1% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The desktop XAFS is a compact laboratory device that can perform XAFS analysis in a local laboratory. It uses X-rays to irradiate samples and detects subtle structural changes in and around the X-ray energy absorption edge to obtain local environmental information of specific elements in the material, such as coordination number, bond length, and oxidation state. Compared with traditional XAFS technology that relies on large synchrotron radiation sources, desktop XAFS instruments are more convenient and cost-effective to use, and can provide key chemical state and structural information in a shorter time. It is suitable for research in many fields such as materials science, chemistry, environmental science, and life science.

This report is a detailed and comprehensive analysis for global Desktop X-ray Absorption Fine Structure Spectrometer market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
