According to our (Global Info Research) latest study, the global Destination Dispatch System (DDS) market size was valued at US\$ 2301 million in 2025 and is forecast to a readjusted size of US\$ 4664 million by 2032 with a CAGR of 10.7% during review period.

A destination dispatch system (DDS) is an intelligent transportation management system for optimizing elevator group control. Its core principle is that passengers pre-register their destination floor via a floor input device before entering the elevator. The system automatically groups passengers heading to the same or similar floors and assigns them to the optimal elevator, thereby reducing the number of stops, shortening waiting time, and improving overall operational efficiency. Essentially, this system restructures the traditional 'board first, then select floor' elevator control method, shifting the control logic from inside the elevator car to outside, achieving algorithm-driven optimization of passenger flow allocation. It is widely used in high-rise office buildings, airports, hospitals, commercial complexes, and intelligent buildings, and is one of the core technologies of modern smart buildings and vertical transportation systems.

The destination dispatch system (DDS) industry is poised for continued growth and intelligent upgrades. Its core drivers include the increasing number of supertall buildings globally, rising urban population density, and accelerated smart building construction. Meanwhile, green building standards are pushing elevator systems towards lower energy consumption and higher efficiency, making DDS a crucial technology for reducing elevator energy consumption and improving carrying efficiency. Furthermore, the integration of AI algorithm optimization, the Internet of Things (IoT), digital twin building management systems, and technologies such as facial recognition and

seamless mobile access is upgrading DDS from a traditional group control system to an 'intelligent people flow operating system.' Its penetration rate in airport hubs, supertall office buildings, and smart city infrastructure will continue to increase, with the fastest growth in the Asia-Pacific and Middle East regions. The industry as a whole is evolving from device-level control systems to data-driven building operating systems.
