According to our (Global Info Research) latest study, the global Desulfurization Defoamer market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Desulfurization defoamer is a chemical substance specially used to eliminate or inhibit the foam generated in the desulfurization process. In the desulfurization process, especially in the wet desulfurization process, a large amount of foam is often generated due to the contact and chemical reaction between flue gas and desulfurization liquid. The presence of these foams will not only affect the desulfurization efficiency, but also lead to unstable equipment operation and even cause foam overflow, increase operating costs and environmental pollution risks.
