The desulfurization and dust removal fan is a key equipment used in industrial emission treatment systems. It is mainly used for flue gas desulfurization and dust removal to reduce the emission of harmful substances and meet environmental protection standards. Its main functions include removing sulfur dioxide (SO₂) and other harmful gases in flue gas through wet desulfurization technology, and removing solid particles (such as dust, coal dust, etc.) in flue gas through dust removal devices. It provides sufficient air flow pressure to push the flue gas through the desulfurization tower and dust removal equipment to ensure that the pollutants in the exhaust gas are effectively controlled.
