Detectable Underground Warning Tape is a specialized type of warning tape designed to alert excavation crews to the presence of buried utility lines while allowing for easy location and detection with equipment. Unlike regular warning tape, detectable underground warning tape includes a metallic layer (typically made of aluminum) that can be traced using electronic locating equipment, even when buried several feet underground. This feature makes it highly useful in areas where underground lines, such as gas, water, electric, and telecommunications lines, are not visible.
