According to our (Global Info Research) latest study, the global Deutenzalutamide Soft Capsules market size was valued at US\$ 30.87 million in 2025 and is forecast to a readjusted size of US\$ 375 million by 2032 with a CAGR of 12.5% during review period.

Deutenzalutamide soft capsules are a novel oral androgen receptor inhibitor modified by deuteration. By specifically binding to the androgen receptor and blocking its signal transduction, they inhibit the proliferation and survival of tumor cells, and are mainly used for the treatment of metastatic castration-resistant prostate cancer. As a deuterated improved drug based on enzalutamide, its structural optimization enhances metabolic stability, prolongs its duration of action in vivo and improves safety. Featuring favorable oral absorption and convenient administration, it provides a better-tolerated therapeutic option for patients with advanced prostate cancer and holds important clinical value in the field of genitourinary oncology. In 2025, global Deutenzalutamide soft capsules production reached approximately 120,000 units.

Deutenzalutamide soft capsules, as the first deuterated androgen receptor inhibitor approved in China, have filled the gap in domestic innovative drugs for the targeted treatment of metastatic castration-resistant prostate cancer. Relying on deuteration technology, they have achieved remarkable improvements in metabolic stability and safety, showing clear clinical advantages in reducing central nervous system adverse reactions and enhancing tolerability in elderly patients.

Its market positioning focuses on differentiated therapeutic needs, mainly serving patients intolerant to or with unsatisfactory efficacy from existing medications, thus forming misplaced competition with the original enzalutamide and domestic generics

and avoiding fierce price wars.

With the rising incidence of prostate cancer, accelerating population aging, and official inclusion in the medical insurance catalogue in China, the drug's market accessibility and growth potential have been greatly enhanced, making it an important force for domestic innovative drugs to replace foreign products and seize the high-end genitourinary oncology market.

In the future, its commercialization will be promoted through the coordination of medical insurance reimbursement, hospital access, and academic promotion. Relying on its unique clinical value and status as a domestic innovative drug, it will continue to expand its share in the rapidly growing prostate cancer drug market.
