Deuterated ethanol, also known as ethanol-d6 or deuterated ethanol-D6, is a special organic compound. Its chemical formula is C_2D_6O , and the main difference from ordinary ethanol (C_2H_6O) is that the hydrogen atoms (H) in its molecule are replaced by deuterium atoms (D). This substitution gives deuterated ethanol some unique physical and chemical properties.

According to our (Global Info Research) latest study, the global Deuterium Ethanol market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.

In scientific research and industrial applications, deuterated ethanol is widely used due to its unique properties. For example, it can be used as a deuterium-labeled solvent in analytical techniques such as nuclear magnetic resonance (NMR), helping researchers more accurately analyze and identify the structure and properties of other compounds. In addition, deuterated ethanol can serve as a model compound for evaluating fine structural changes caused by rotamerization.
