Abstracts

Developmental and Epileptic Encephalopathies (DEE) consists of several types of severe brain disorders in which the epileptic electrical discharges may add to progressive psychomotor dysfunction. They are a group of nosologies that are related to an early age and manifest with electroencephalography (EEG) paroxysmal activity that is often aggressive, seizures that are commonly multi-form and intractable, cognitive, behavioral and neurological deficits that may be relentless and sometimes lead to early death. Cognitive deficits and behavioral disturbances are presumed to be the main and sometimes the first and unique manifestation of electrographic epileptic discharges in epileptic encephalopathy. There are various sub syndromes in Epileptic encephalopathies namely West syndrome, Dravet syndrome, Ohtahara syndrome, Lennox-gastaut, Landau-Kleffner syndrome, Epilepsy with Continuous Spike-and-Waves during Slow-Wave Sleep, Myoclonic Status in Non-Progressive Encephalopathies, Atypical Benign Partial Epilepsy of Childhood, Hypothalamic (Gelastic) Epilepsy.
