Dew point moisture meter is a physical property analysis instrument for measuring gas dew point. The working principle is the temperature at which the water vapor content in the gas reaches saturation, which is one of the ways to express the absolute humidity of the gas. Therefore, the dew point meter is a special kind of hygrometer. Let a mirror surface cool down in the humid air of the sample until the moment when dew drops (or ice crystals) appear on the mirror surface, measure the average temperature of the mirror surface, which is the dew (frost) point temperature.
