According to our (Global Info Research) latest study, the global Dewatering Pump market size was valued at US\$ 4529 million in 2024 and is forecast to a readjusted size of USD 7203 million by 2031 with a CAGR of 6.9% during review period.

Dewatering pumps are centrifugal pumps installed in a building that is situated below the groundwater level, to reduce the water level and then maintain it at this level. One example is in underground mining in which water penetrating into the adits is pumped up to the surface.

Standard Centrifugal Pumps are versatile pumps that provide an economical choice for general purpose clear water dewatering. The design uses a directmounted impeller to move water by creating a partial vacuum. The velocity of the rotating impeller pressurizes the water through the discharge outlet. These pumps are suitable for construction, municipal, agricultural, and residential applications and should be used in clear water with limited solids.

Centrifugal force created by the rotating impeller pushes water away from the eye; where pressure is the lowest, to the vane tips where pressure is the highest. The velocity of the rotating vanes pressurizes the water forced through the volute and discharged from the pump.

Global Dewatering Pump main players are Grundfos, Sulzer, Xylem, The Weir Group, etc. Global top four manufacturers hold a share over 40%. Europe is the largest market, with a share nearly 30%.
