Dexterous hands tendon material refers to the substances used to transmit force in the tendon - driven mechanism of dexterous hands. It plays a crucial role in enabling the fine - grained manipulation and flexible movement of dexterous hands, similar to the function of tendons in human hands.

These materials usually need to have high strength and toughness to withstand the pulling force during the movement of dexterous hands and ensure reliable operation. At the same time, they should have good elasticity and flexibility to mimic the deformation and recovery characteristics of human tendons, allowing the fingers of dexterous hands to perform a variety of complex movements, such as flexion, extension, and rotation. In addition, excellent fatigue resistance is also a necessary property, as the tendon materials of dexterous hands need to endure repeated stretching and contraction during long - term use to ensure stable performance.
