Abstracts

According to our (Global Info Research) latest study, the global DFB Laser Chip market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

A distributed-feedback laser (DFB) is a type of laser diode, quantum-cascade laser or optical-fiber laser where the active region of the device contains a periodically structured element or diffraction grating. The structure builds a one-dimensional interference grating (Bragg scattering), and the grating provides optical feedback for the laser. This longitudinal diffraction grating has periodic changes in refractive index that cause reflection back into the cavity. The periodic change can be either in the real part of the refractive index or in the imaginary part (gain or absorption). The strongest grating operates in the first order, where the periodicity is one-half wave, and the light is reflected backwards.

The core manufacturers of DFB laser chips are mainly from China, Japan and United States.

This report is a detailed and comprehensive analysis for global DFB Laser Chip market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
