Abstracts

Diabetes is group of metabolic disorder, often referred as diabetes mellitus, results in high blood glucose levels. Body cells use glucose as a source of energy and insulin is important for the cells to absorb this glucose. When the body cells loose the capacity to respond to the insulin or body is not capable of producing sufficient insulin, it leads to an increase in blood glucose levels in the body. This condition is referred to as diabetes. Depending on the cause of development, it is divided into three types, which includes type 1 diabetes (body loses the capacity of producing sufficient insulin), type 2 diabetes (most common and body cells do not respond to insulin) and gestational diabetes (occurs in pregnant women). Among these, type 2 diabetes is the most common type and affects over 90% of the global diabetic patients.
