Abstracts

According to our (Global Info Research) latest study, the global Diabetic Nephropathy market size was valued at USD 2517.6 million in 2023 and is forecast to a readjusted size of USD 3447.6 million by 2030 with a CAGR of 4.6% during review period.

Diabetic nephropathy is a disease of the kidney glomerulus and one of the most significant complications in terms of mortality and morbidity for patients with diabetes. Diabetic nephropathy is mainly characterized by macroalbuminuria. The presence of over 300 milligrams of albumin in the urine in 1 day is known as macroalbuminuria. Globally, the diabetic nephropathy market is witnessing significant growth due to rise in the incidence of diabetes and obesity in different regions of the world. In addition, increasing R&D investments in drug discovery and development by various companies, such as Sanofi, Eli Lilly and Mitsubishi Tanabe Pharma is also driving the growth of the market.

According to the Global Use of Medicines 2023 released by IQVIA Institute, the global drug expenditure in 2022 was about US\$1.48 trillion (excluding COVID vaccine and treatment-related expenses), and it is predicted to grow at a rate of 3%-6% in the next few years. In terms of drug expenditure, this number in China was about 166 billion dollars in 2022. It is expected that the expenditure on medicines will increase in the next few years. From the perspective of demand, the trend of population aging, the increase of residents' wealth and the improvement of health awareness will drive the demand for medicines.

Global Use of Medicines 2023 shows that the U.S. market spent about US\$ 62.9 billion on medicines in 2022 on a net ex-factory basis. Overall growth slows as the Inflation

Reduction Act (IRA) spends US\$64 billion to reduce prescription drug prices, and the adoption of new treatments is expected to increase over the next few years. Besides, ex-factory discounts and rebates in drug distribution, the impact of patent expiration, and generic or biosimilar competition will also affect the U.S. pharmaceutical market.
