According to our (Global Info Research) latest study, the global Diagnostic Biomarker market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Biomarkers have its property and the biological functions or molecules that are detected in various vitals of the body such as blood and other fluids. Further, they are then measured in those parts. They may indicate either normal or diseased processes in the body. Biomarkers are used in various purposes such as disease diagnosis, prognosis, prediction and assessment of treatment response. The diagnostic biomarkers have early inferences for detection of Patent Ductus Arteriosus (PDA). Predictive markers provides personalize treatment regimens and prognostic markers predict patient survival and recurrence patterns. Biomarkers are used for clinical diagnostics for detecting multiple diseases, for instance, creatinine for diagnosing renal insufficiency, troponin level for diagnosing myocardial infarction and amylase for pancreatitis.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to

continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
