Diagnostic EP devices are used for the diagnosis of cardiac abnormalities. These devices are used for the diagnosis and treatment of cardiovascular diseases (CVDs). Diagnostic EP devices are one of the fastest growing segments in the global medical devices market. X-ray systems, ECG devices, and diagnostic EP catheters generate a significant proportion of the revenue for the global diagnostic EP devices market. The growing incidence of CVDs such as cardiac arrhythmia drives the growth of the market.

According to our (Global Info Research) latest study, the global Diagnostic Electrophysiology Devices market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Technological advances have enabled vendors to convert large conventional ECG stress test systems into compact and portable systems. Portable ECG devices are suitable for people suffering from chronic diseases such as hypertension, diabetes, and coronary artery disease (CAD). Portable ECG devices allow easy movement and the ambulatory resting ECG monitors are designed specifically for easy home monitoring. The increasing usage of mobile ECG monitoring systems will be one of the key trends that will gain traction in the diagnostic electrophysiology devices market during the next few years.
