## Abstracts

The fusion of plasma membrane with the internal vesicle fusion leads to the secretion of nanovesicles called exosomes into the extracellular environment. The exosomes are released in easily accessible body fluids such as urine and blood and hence acts as a precious source of biomedical tool. As cancer is a booming research area, exosomes may act as a very useful biomarkers for the diagnosis and prognosis of malignant tumor. The application of exosome as a potential biomarker for the various neurodegenerative disorders is also under investigation.
