## Abstracts

Diagnostic wearable medical devices are used to monitor, control, and track an individual's vital signs at regular intervals. These devices are connected to an individual's body for the measurement of certain physiological information. They are available in the form of eyeglasses, watch, clothing, jewelry, and contact lenses. Diagnostic wearable medical devices monitor physiological data through remote or wireless communication and transmit this information to medical professionals or the user. These are autonomous, non-invasive devices that help assess specific medical functions such as blood pressure, body temperature, respiratory rate, glucose quantity, heart rate, and blood oxygen saturation. These devices also help determine parameters such as the heart rate, muscle activity, and calories burned during exercise and activities such as walking and jogging.

According to our (Global Info Research) latest study, the global Diagnostic Wearable Medical Devices market size was valued at USD 6837.7 million in 2022 and is forecast to a readjusted size of USD 15730 million by 2029 with a CAGR of 12.6% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The miniaturization of diagnostic wearables is one of the emerging trends spurring the growth prospects of this market during the predicted period. There has been an increasing focus on the development of smaller, more reliable, and more energy-efficient devices compared to the previous generations of wearables. For instance, a new ingestible tablet embedded with a sensor the size of a grain of salt was developed recently. This sensor is coupled with a wearable transmitter to monitor the physiological conditions and the intake of medications. Moreover, the miniaturization of wearable

health devices is anticipated to have a positive impact on the rapidly growing IoT market. The advances in the IoT technology will enable future health systems to use wearables to establish connections and come up with standard solutions for diverse medical conditions.
