Dial meat thermometers usually have a long metal handle with a round dial at the top that displays different temperatures. Large dial thermometers can be placed in the oven and are suitable for large joints of meat and whole poultry; small dial thermometers cannot be placed in the oven all the time and should only be used to check the temperature of food during and at the end of cooking. The thermometer senses the internal temperature of the food along the long handle, from the tip of the handle to about two inches above. The temperature indicated on the dial is the average of the temperatures obtained along the sensing.
