Abstracts

According to our (Global Info Research) latest study, the global Dialkyl Peroxide market size was valued at US\$ 1526 million in 2025 and is forecast to a readjusted size of US\$ 2161 million by 2032 with a CAGR of 5.1% during review period.

Dialkyl peroxides are a class of organic peroxides with the general structure $R-O-O-R'$, where two alkyl groups are linked by a peroxide bond ($-O-O-$); they are widely used as radical initiators in polymerization (e.g., polyethylene, polypropylene), crosslinking agents for elastomers, and curing agents in thermoset resins due to their ability to decompose into free radicals at controlled temperatures. The supply chain begins upstream with petrochemical feedstocks such as alcohols (e.g., tert-butanol, cumyl alcohol) and hydrogen peroxide, which are reacted through controlled oxidation or substitution processes to produce specific dialkyl peroxides (e.g., dicumyl peroxide, di-tert-butyl peroxide); midstream, specialty chemical manufacturers conduct synthesis, purification, stabilization, and formulation (often diluted or phlegmatized for safety due to thermal sensitivity), followed by strict packaging and hazardous logistics; downstream, these products are distributed to plastics and rubber processors, polymer compounders, wire & cable manufacturers, and composite material producers, where they are used in extrusion, molding, and crosslinking applications, with handling governed by stringent safety and transport regulations (e.g., organic peroxide classifications under ADR/IMDG/UN). In 2025, global Dialkyl Peroxide output was about 1.1 million tons with 1.4 million tons of capacity, average prices of USD 1,200–3,200 per ton, and gross margins around 24%.
