Abstracts

According to our (Global Info Research) latest study, the global Diallyl Terephthalate(DATP) market size was valued at US\$ 9.03 million in 2025 and is forecast to a readjusted size of US\$ 13.19 million by 2032 with a CAGR of 5.5% during review period.

Diallyl terephthalate(DATP) is an organic compound with the chemical formula $C_{16}H_{22}O_4$ and a molecular weight of 278.35 g/mol. It is a colorless and transparent liquid with low toxicity and volatility, easily soluble in many organic solvents such as ethanol, acetone, and benzene. Diallyl terephthalate(DATP) has a wide range of applications in industry. It is an important organic solvent that can be used in the production of chemicals, plastics, coatings, resins, and fragrances. In addition, diallyl terephthalate can also be used as a solvent and catalyst in chemical reactions, for organic synthesis and chemical separation.

In 2025, global Diallyl Terephthalate(DATP) production reached approximately 891 Tons, with an average global market price of around US\$ 9.85 per Kg. The annual production capacity of diallyl terephthalate is 1,300 tons, with a gross profit margin of about 25%.

The upstream mainly includes terephthalic acid, allyl alcohol, catalysts, polymerization inhibitors, and auxiliary materials required for distillation and washing.

The downstream mainly includes thermosetting resins, electronic insulation materials, electronic packaging resins, high-temperature resistant coatings, structural adhesives, glass fiber reinforced composite materials, and special polymer production enterprises.

Raw material costs account for 65%; Labor costs account for 10%; The manufacturing cost accounts for 25%.

The application of DATP in resins and composite materials is very extensive. Due to the fact that the double bonds in its molecular structure can undergo cross-linking reactions under heating or light conditions, forming a three-dimensional network structure, it is commonly used in the preparation of thermosetting resins. These resins have excellent mechanical strength, heat resistance, and electrical insulation properties, making them suitable for manufacturing high-performance composite materials. For example, in the aerospace field, DATP resin is used to manufacture lightweight and high-strength structural materials to improve the performance and fuel efficiency of aircraft. In addition, in the electronics industry, DATP resin is also used to manufacture printed circuit boards (PCBs) and electronic packaging materials, as it has good insulation and heat resistance, which can protect electronic components from high temperatures and moisture.

The application of DATP in coatings and paints is also very important. Due to its cross-linking properties, DATP can serve as the main component of coatings, providing excellent adhesion, chemical resistance, and weather resistance. This coating is widely used in the automotive, marine, and construction industries, effectively protecting metal and concrete surfaces from corrosion and wear. In addition, DATP coatings can also be used to manufacture high-performance fire-resistant coatings due to their excellent flame retardant properties, which can delay the spread of flames.

The application of DATP in adhesives and sealants cannot be ignored. Due to its high strength and heat resistance after cross-linking, DATP can be used as the main component of adhesives for manufacturing high-performance industrial adhesives. These adhesives are suitable for bonding various materials such as metals, plastics, and ceramics, and are widely used in fields such as automotive, electronics, and aerospace. In addition, DATP can also be used to manufacture sealants for filling and sealing gaps in various materials and structures, preventing the penetration of liquids and gases.

DATP still has applications in some special fields. For example, in optical materials, DATP can be used to manufacture high transparency resins, suitable for manufacturing optical lenses and fibers. In the biomedical field, DATP resin has also been studied for manufacturing biocompatible materials, such as artificial joints and dental materials, due to its excellent mechanical properties and biocompatibility.
