Diamond High-Speed Dental Bur is a cutting tool used in dental procedures, primarily made of synthetic diamond particles (diamond grit) bonded to a metal substrate. Due to the extreme hardness of diamonds, this bur is capable of efficiently cutting or grinding hard dental tissues, such as enamel, dentin, and restorative materials, when rotating at high speeds. Diamond burs are widely used in dental procedures for tooth preparation, caries removal, and adjusting the margins of restorations, typically in the high-speed handpieces of dental drills.
