According to our (Global Info Research) latest study, the global Diamond Microdermabrasion Machine market size was valued at US\$ 341 million in 2025 and is forecast to a readjusted size of US\$ 648 million by 2032 with a CAGR of 9.1% during review period.

In 2025, global Diamond Microdermabrasion Machine production reached approximately 275,000 units. The diamond microdermabrasion machine is a beauty care device that uses diamond-coated microcrystal tips to perform physical exfoliation and skin resurfacing treatments on the skin surface. It is mainly used for removing dead skin cells, improving skin texture, reducing fine lines, and promoting skin renewal. The device typically uses diamond tips with different levels of abrasiveness together with a vacuum suction system to gently polish the skin surface while removing dead skin cells and impurities, thereby helping improve enlarged pores, dull skin tone, superficial acne marks, and rough skin texture. Compared with traditional chemical peeling methods, diamond microdermabrasion machines feature non-chemical treatment, lower skin irritation, shorter recovery time, and greater operational control. They are widely used in beauty salons, skin management centers, and medical aesthetic care applications. Some high-end devices also integrate serum infusion, hot and cold therapy, and intelligent suction adjustment functions to enhance overall treatment effectiveness and user comfort. As consumer demand for non-invasive skin management and refined skincare continues to increase, modern diamond microdermabrasion machines are evolving toward greater intelligence, multifunctionality, enhanced safety, and portability.

The diamond microdermabrasion machine market has experienced steady growth in recent years, driven by the upgrading of skincare consumption, the increasing popularity

of non-invasive beauty treatments, and rising consumer demand for deep cleansing, exfoliation, and skin texture improvement. As a beauty device combining physical skin resurfacing with vacuum suction technology, it is widely used in beauty salons, skin management centers, medical aesthetic institutions, and home care applications. With consumers placing greater emphasis on safety, comfort, operational convenience, and immediate skincare results, demand continues to increase for features such as multiple diamond tip specifications, adjustable suction power, refined exfoliation, serum infusion, and hot and cold therapy functions. Meanwhile, beauty service providers are enhancing the differentiation of basic cleansing and skin rejuvenation treatments, driving diamond microdermabrasion machines toward greater intelligence, multifunctionality, portability, and higher operational stability. In the future, the market is expected to maintain growth potential, while competition will increasingly focus on resurfacing effectiveness, suction stability, skin compatibility safety, device durability, user experience, and brand after-sales service capabilities.
