Abstracts

According to our (Global Info Research) latest study, the global Diamond and Stone Removal market size was valued at US\$ 2931 million in 2025 and is forecast to a readjusted size of US\$ 4603 million by 2032 with a CAGR of 6.6% during review period.

Diamond and stone removal refers to the process of extracting diamonds and other precious stones from their settings in jewelry. Professionals performing diamond and stone removal need to have the necessary skills and tools to ensure the stones are extracted safely and without damage.

The global diamond and stone removal market is an established but highly fragmented business-to-business service market.

North America currently has the most visible and mature outsourced service ecosystem. The United States has a large network of precious-metal refiners serving jewelers, pawn shops, brokers, estate buyers and manufacturers. Competition is based on transparent weighing and assay, insured logistics, video-monitored processing, recovery of small melee diamonds, rapid settlement and optional gemstone purchasing.

Europe has a developed precious-metal refining sector, but stone removal is commonly incorporated into broader refining, luxury-jewelry repair and responsible-sourcing operations. Environmental compliance, chemical handling, chain-of-custody documentation and recycled-content verification are particularly important. The region offers attractive opportunities for cyanide-free processing, luxury-brand inventory recycling and documented recovered-gemstone supply. However, high labor, environmental and waste-treatment costs favor larger integrated refiners rather than

small standalone operators.

Asia-Pacific has substantial long-term processing potential because of its large jewelry manufacturing, diamond processing and precious-metal trading industries. India, China, Hong Kong, Thailand and Japan generate significant volumes of manufacturing returns, old jewelry and stone-set inventory. Much of the activity remains in-house or is handled by local refiners, making the market less transparent than North America. Hong Kong-based Tin Fung, for example, provides precious-metal refining together with stone removal and gold-melting services. India's large gem and jewelry export industry also provides a substantial potential customer base for specialized recovery, screening and remanufacturing services.

The Middle East market is concentrated in the UAE, particularly Dubai, where gold refining, bullion trading and jewelry manufacturing are closely integrated. Al Etihad Gold offers diamond and gold separation as part of its refining platform, demonstrating the regional preference for vertically integrated service providers.

The Australia and New Zealand market is smaller but relatively organized. Providers such as Morris & Watson combine advanced chemical gemstone removal with precious-metal refining. Demand comes primarily from jewelers, manufacturers and precious-metal dealers rather than high-volume international scrap aggregators.
