Abstracts

According to our (Global Info Research) latest study, the global Diamond Recutting Service market size was valued at US\$ 589 million in 2025 and is forecast to a readjusted size of US\$ 907 million by 2032 with a CAGR of 6.3% during review period.

A Diamond Recutting Service is a specialized service provided by diamond cutters or jewelers that involves reshaping or recutting a diamond to enhance its appearance, brilliance, and sometimes its value. This process is performed by skilled gem cutters who carefully analyze the diamond's current state and determine how to maximize its potential through precise cutting and polishing. It's important to note that diamond recutting is a complex and potentially risky process that should only be undertaken by experienced professionals. The diamond may lose some weight during the recutting, which can affect its value.

The market for Diamond Recutting Services is a niche but steady segment. Its growth is fundamentally tied not to the sale of new diamonds, but to the *afterlife* of existing ones—repairing damage and adapting heirloom stones to modern tastes. The landscape is defined by artisan skill concentrated in historic hubs, and while technology is sharpening precision, the future is contested by the dual pressures of volatile trade tariffs and the booming synthetic diamond market.

The primary demand driver is the repair of chipped or damaged stones, especially risks incurred during jewelry manufacturing, setting, and shipping. Consumer demand for higher brilliance and customized shapes is pushing the adoption of laser cutting and AI-powered design tools, which minimize diamond weight loss and enhance fire. The rise of online diamond retail has paradoxically increased demand for recutting due to higher

incidence of in-transit damage.

A growing trend of 'diamond upcycling' from old or inherited jewelry is creating a new market of fashion-driven reshaping beyond just accidental damage.
