Abstracts

According to our (Global Info Research) latest study, the global Diamond Scriber market size was valued at US\$ 386 million in 2024 and is forecast to a readjusted size of USD 591 million by 2031 with a CAGR of 6.4% during review period.

Diamond scribes are designed to scribe or mark ultra-hard surfaces, including silicon and alumina ceramics in electronic assembly and rework. These scribes are supplied with a 060' diameter diamond permanently mounted on a 0.5' diameter metal plate.

With the continuous development of micro and nano processing and precision manufacturing technology, the demand for high precision machining tools is also increasing. Diamond scribes play an important role in high precision machining due to their hardness and wear resistance. Diamond scribes are commonly used for cutting, scribing and marking on hard material surfaces for different applications in manufacturing such as semiconductor scribing, ceramic marking and glass cutting. The use of diamond scribes in the field of micro and nanofabrication is gradually increasing for the fabrication of tiny structures, nanodevices and optical components, among others. Manufacturers are likely to continue to innovate in scribe design and tool technology to improve machining efficiency, accuracy and scribing quality. As manufacturing becomes more automated and digitised, diamond scribes are also likely to progressively integrate automated control and digitisation features for more accurate machining. As new materials emerge and new applications are explored, diamond scribes may be used in more fields, such as energy, biomedicine, and nanotechnology. Manufacturers are likely to focus on the environmental performance of the scribe, including waste disposal and sustainability of material use.
