Abstracts

The global Diamond Slurries market size is expected to reach \$ 176.4 million by 2029, rising at a market growth of 6.0% CAGR during the forecast period (2023-2029).

Global 5 largest manufacturers of Diamond Slurries are Engis Corporation, Saint-Gobain, Lapmaster, Kemet International and Iljin Diamond, which make up over 55%. Among them, Engis Corporation is the leader with about 20% market share.

Asia-Pacific is the largest market, with a share about 80%, followed by Europe and North America, with the share about 7% and 12%. In terms of product type, Water-Soluble Diamond Slurry occupies the largest share of the total market, more than 70%. In terms of product application, Metal and Semiconductor both occupy the largest share of the total market, about 27%.

The conventional definition of slurry is a mixture of water and small particles of a solid. The particles are not normally suspended in the liquid and are maintained in suspension by agitation during the use of the slurry. Diamond Slurry is that the particles are micron sized diamond particles and the liquid (carrier vehicle) can be oil or water based. Diamond Slurries are used for polishing materials that require a mirror finish. They are often used in metallurgical specimens, carbide dies, carbide seals, spectacle glass industry, semiconductor industry and for polishing diamonds, etc.

This report studies the global Diamond Slurries production, demand, key manufacturers, and key regions.
