Diamond-wire squaring machine is an automated equipment that uses diamond wire cutting technology and is specially used for precise square processing of silicon ingots. The equipment uses high-carbon steel wire or tungsten wire as the busbar, electroplated with diamond abrasives, to achieve a high-speed and high-efficiency cutting process, thereby ensuring the geometric accuracy and surface finish of the silicon wafer. With its excellent cutting speed, low energy consumption and environmental protection characteristics, the diamond wire squarer has replaced the traditional mortar cutting method in the photovoltaic industry, greatly improving production efficiency and silicon wafer quality. With its advantages in cutting accuracy, stability and ease of operation, the diamond wire squarer has become an important technical equipment in the field of photovoltaic material processing.
