Abstracts

The global Diapers market size is expected to reach \$ 57420 million by 2032, rising at a market growth of 2.7% CAGR during the forecast period (2026-2032).

A diaper (American and Canadian English) or a nappy (Australian English, British English, and Hiberno-English) is a type of underwear that allows the wearer to urinate or defecate without using a toilet, by absorbing or containing waste products to prevent soiling of outer clothing or the external environment. When diapers become wet or soiled, they require changing, generally by a second person such as a parent or caregiver. Failure to change a diaper on a sufficiently regular basis can result in skin problems around the area covered by the diaper.

Diapers are made of cloth or synthetic disposable materials. Cloth diapers are composed of layers of fabric such as cotton, hemp, bamboo, microfiber, or even plastic fibers such as PLA or PU, and can be washed and reused multiple times. Disposable diapers contain absorbent chemicals and are thrown away after use.

Diapers are primarily worn by infants, toddlers who are not yet potty trained, and by children who experience bedwetting. They are also used by adults with incontinence, in certain circumstances where access to a toilet is unavailable, or as part of a sexual fetish. These can include those of advanced age, patients bed-bound in a hospital, individuals with certain types of physical or mental disability, and people working in extreme conditions, such as astronauts. It is not uncommon for people to wear diapers under dry suits.

Global core diapers manufacturers include P&G, Kimberly Clark, Unicharm etc. The top 5 companies hold a share about 65%. Asia-Pacific is the largest market, with a share

about 35%, followed by North America and Europe with the share about 23% and 22%. In terms of product, disposable diapers is the largest segment, with a share over 95%. And in terms of application, the largest application is baby diapers, followed by adult diapers.
