Diaphragm Bellows Cylinders are pneumatic actuators that use a flexible diaphragm and bellows structure to create linear motion when compressed air is applied. Unlike traditional piston cylinders, diaphragm bellows cylinders provide frictionless movement, resulting in highly precise, smooth, and leak-free operation. They are ideal for applications requiring gentle force, precise positioning, or where contamination must be minimized, such as in semiconductor manufacturing, pharmaceutical processing, and food handling. Their simple, durable design ensures long service life with minimal maintenance, and they perform reliably even in harsh or sensitive environments.
