Abstracts

According to our (Global Info Research) latest study, the global Diaphragm Coating Particle market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

The diaphragm coating material includes diaphragm coating particles and diaphragm coating solvent. Diaphragm coating particles can be divided into two categories: organic and inorganic. Inorganic materials mainly include ceramics (boehmite, alumina), and organic materials mainly include PVDF, PMMA, and aramid. The main advantage of inorganic materials is that the technology is more mature, the production cost is lower, the cost performance is high, and the economy has obvious advantages compared with organic coating; the biggest advantage of organic coating is that the product performance is good, but the price is expensive.
