According to our (Global Info Research) latest study, the global Diaphragm Metering Pump market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Diaphragm metering pump uses a specially designed and processed flexible diaphragm instead of piston to realize reciprocating movement under the action of the driving mechanism to complete the suction - discharge process. Because of the isolation of the diaphragm, the separation between the metering fluid and the drive lubrication mechanism is realized in structure.
