According to our (Global Info Research) latest study, the global Diaphragm Pressure Sensor market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Diaphragm pressure sensor is a sensor for measuring pressure. Its working principle is to measure the pressure by using the deformation of the elastic diaphragm after being compressed. Diaphragm pressure sensors are usually composed of a thin film of metal or elastic material. There are some electrodes or resistors on the film. When the film is subjected to an external force, it will deform and cause a voltage change between the resistance or electrodes. By measuring the voltage change Calculate the size of the force, and then deduce the value of the pressure.
