Abstracts

The global Diaphragm Pressure Sensor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Diaphragm pressure sensor is a sensor for measuring pressure. Its working principle is to measure the pressure by using the deformation of the elastic diaphragm after being compressed. Diaphragm pressure sensors are usually composed of a thin film of metal or elastic material. There are some electrodes or resistors on the film. When the film is subjected to an external force, it will deform and cause a voltage change between the resistance or electrodes. By measuring the voltage change Calculate the size of the force, and then deduce the value of the pressure.
