## Abstracts

The global Diaphragm Type Pool Bottom Sludge Valve market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The demand for diaphragm bottom sludge valves in the water treatment and industrial fields continues to grow, mainly benefiting from the increase in environmental awareness and the acceleration of industrialization. As global water resources become increasingly scarce, the demand for water treatment equipment and technology is expected to continue to increase, which will promote the growth of the diaphragm bottom sludge valve market.

The diaphragm bottom sludge drain valve is a sludge drain device used in ponds, water treatment plants and industrial fields. They control the flow of fluid through the lifting and lowering of the diaphragm, thereby effectively removing sludge and impurities at the bottom. These valves play a vital role in the water treatment industry, helping to keep water bodies clean and ensuring the efficient operation of water treatment processes.
