Abstracts

Diaphragm valves are devices that are used to regulate and control the flow of fluids in an industrial facility. Valves operate by opening, closing, or partially blocking the passage ways that allow the movement of fluids from high pressure to low pressure or vice-versa. Valves are used in several discrete and process industries for the transportation of fluids between two points within an enclosed system.

Scope of the Report:

This report focuses on the Diaphragm Valves in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The growing demand from radioactive waste management industry is one of the key factors that will drive the market's growth during the estimated period. The demand for electricity is increasing due to the rapid industrialization and growth in population. The increasing demand for electricity will boost the installation of nuclear plants, which is considered as the second-highest source of power generation. Diaphragm valves are used in several processes in these plants to dispose of the radioactive wastes safely. Low-level wastes, intermediate-level wastes, and high-level wastes are the three types of radioactive wastes, which are safely disposed by using diaphragm valves. The global diaphragm valves market comprises of small, medium, and large multinational players. These vendors extensively focus on offering a wide range of valves to end-user industries. They are also concentrating on increasing their product visibility and the formation of a robust distribution framework by adopting consolidation and penetration strategies and mergers and acquisitions. The need for more infrastructure in the power, pharmaceutical, chemical, and water

treatment industries is increasing due to the rising population and rapid industrial expansion. The increasing population, especially in China and India is resulting in the reduced access to clean water, which will boost the demand for water treatment activities. This will drive the deployment of diaphragm valves in the water treatment industry until the end of 2021.

The worldwide market for Diaphragm Valves is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
