Abstracts

According to our (Global Info Research) latest study, the global Dibasic Acid market size was valued at US\$ 15846 million in 2025 and is forecast to a readjusted size of US\$ 22584 million by 2032 with a CAGR of 5.2% during review period.

In 2025, global Dibasic Acid output reached about 11 million tons and global capacity of around 12 million tons. The average price is about USD 1,400 per ton, with gross margins near 25%. Dibasic acids are organic compounds containing two carboxyl (-COOH) functional groups within the same molecule, enabling them to react with alcohols, amines, and other chemicals to form polyesters, polyamides, plasticizers, coatings, adhesives, lubricants, and specialty intermediates. Common commercial dibasic acids include adipic acid, sebacic acid, azelaic acid, succinic acid, glutaric acid, and dodecanedioic acid. Dibasic acids may be produced through petrochemical routes (such as oxidation of cyclohexane, cyclohexanol, or paraffins), bio-based fermentation of renewable feedstocks (such as glucose or plant-derived oils), or chemical synthesis from hydrocarbons. The supply chain begins with upstream raw materials including crude oil derivatives, natural gas, biomass, vegetable oils, sugars, catalysts, and process chemicals, followed by intermediate production through oxidation, fermentation, hydrogenation, purification, crystallization, and drying processes. Midstream manufacturers convert these intermediates into industrial-grade, polymer-grade, or high-purity dibasic acids, which are packaged and distributed through chemical suppliers and distributors. Downstream, dibasic acids are consumed by manufacturers of engineering plastics, polyester resins, alkyd resins, synthetic lubricants, plasticizers, powder coatings, adhesives and sealants, personal care ingredients, pharmaceuticals, agrochemicals, and various specialty chemical products.
